

WEEK 5

Task 1: Change the text appearing into your React Application

Task2: Change the background color of your application:

Task3 : Creating stateless function component using React

Step 1: Create a file in visual code studio and save it as myGreetingApp.js

```
import './App.css';

function GreetingElement() {
  const greeting = 'Hello! Let\'s start learning Function Component...';

  return (
    <div className="App">
      <h1>{greeting}</h1>
    </div>
  );
}

export default GreetingElement;
```

Step2: Using Created functional Component in index.js file.

Task 4 Creating the Functional Component using properties

Hi, it's Monday!
